SS-5699

Product Description

SS-5699 is a silicone RTV adhesive rubber developed for applications requiring fast development of physical properties and fast unprimed adhesion. SS-5699 is a 1-part silicone that allows handling of the bonded assembly within one hour of application to the substrate. When cured, the elastomer resists typical automotive fluids and high temperatures. SS-5699 works well in manual and automatic dispensing equipment.

Product Features

- Excellent unprimed adhesion to plastic, metal and glass
- Thixotropic, heavy bodied paste
- Fast onset of adhesion
- Fast RT cure

Typical Applications

- Form in place gaskets
- Automotive assembly and MRO
- Adhesive sealant

Chemical Cure System

Oxime

Automotive Silicone RTV Gasket Maker for Import Applications

Curing

Cure speed can be accelerated with increased humidity and heat to very rapid cure times. Typical utilization involves dispensing in open air and after exposure to ambient humidity, a room temperature cured rubber is formed.
Solids

98% solids

Adhesion

Excellent unprimed adhesion to plastic, metal and glass

Service Temperature

-45 to 260°C

Limitations

Do not use product on head gaskets or fuel immersion applications. Allow to fully cure before putting assembly into service. Ensure enough product remains between flanges to be effective in an assembly.

Handling and Safety

For maximum shelf life, keep containers sealed when not in use. Keep out of the reach of children. Uncured sealant irritates eyes and skin. Refer to the SDS.

Shelf Life

Sealed containers are guaranteed for 12 months from the ship date when stored in a cool dry area below 70°F.
